

Project Implementation Report

This report outlines the work I implemented for the project, focusing on JavaScript functionality, SEO improvements, and full form validation and structure enhancements. Each section provides a summary of completed tasks and the value they add to the system.

1. JavaScript Functionality Implemented

I successfully implemented several interactive JavaScript features to enhance user experience across the website. These include:

- ✓ Full form validation to ensure accurate input
- ✓ Dynamic cost and availability responses based on user selections
- ✓ Display and hiding of result containers using DOM manipulation
- ✓ Automated construction of email content for the contact form
- ✓ Improved form feedback through structured result boxes

These implementations ensure the system is more user-friendly, responsive, and efficient.

2. SEO Enhancements Implemented

To improve the website's visibility and accessibility, I completed the following SEO optimizations:

- ✓ Added meta titles
- ✓ Added meta descriptions
- ✓ Ensured full mobile responsiveness
- ✓ Cleaned and structured the HTML for better readability and indexing
- ✓ Improved accessibility through proper labeling and layout structure

These updates help search engines understand and rank the website more effectively.

3. Form Development and Validation Implemented

I completed two fully functional and validated forms: the Enquiry Form and the Contact Form.

Enquiry Form

- ✓ Required inputs with custom validation
- ✓ Dynamic cost and availability generation
- ✓ Clean, structured form layout

Contact Form

- ✓ Full input validation
- ✓ Message-type selector for organised responses
- ✓ Automatic email creation using a mailto: link
- ✓ Well-structured and user-friendly design

These improvements ensure reliability, accuracy, and professionalism across all form interactions.

Overall, I implemented all required functionality successfully, resulting in a more responsive, accessible, and professional system. The improvements collectively enhance both user experience and website performance.
